KENWOOD

2018 Dayton Hamvention Kenwood Forum

Kenwood Forum Committee

Mark Gilger – WB0IQK
Jan Servaites – N8CBX
Peter Shilton– VE6PS
Jeff Covelli – WA8SAJ

- Agenda:
 - Help with Parts, Documentation & Service
 - Hybrid Net Repeat Questions
 - Hybrid Net Statistics
 - Hybrid Relays
 - SDR integration into the Legacy line.
 - Questions and Answers

1 How many people
attended last years 2017
forum?

KENWOOD

2. How many people have a Kenwood Hybrid?

3. How many people operate their Kenwood Hybrids regularly?

4. How many people still have their Hybrid purchased back in the 70 & 80's?
5. I'm looking for Serial Numbers, Original Purchase dates and where purchased.

Serial Number Data Base

CALL	MODEL		S/N	DATE	Full Date	Purchased From:

Relays in the Kenwood Radios Speaker – Mr Jan Servaites (N8CBX)

Topics in this lecture:

- Brief introduction
- General comments & tips on each model
- Repairing the TS530 Antenna Relay

Hamvention Forums 2018
Kenwood Hybrid Radio Legacy
Rm 5, 10:30am – 11:30am
Saturday, May 19, 2018

Relay Problems

- Relay Problems:
 - Plastic cover doesn't seal where it joins the relay body
 - Moisture, oxygen, contaminants are free to enter & exit the relay
 - Moisture in the air is the main enemy
 - They work well, but suffer from long periods in storage, especially in a humid environment.
- 530/830 series has sealed signal relay, but they go bad
 - They are being used beyond maximum current specification
 - Problem caused by repeated discharging of a charged capacitor on one of the contacts
 - A large instantaneous current is produced that exceeds this relay's current rating
- 530 antenna relay is light duty
 - Not as tough as the 830 antenna relay
 - It is not replaceable like the 830; its soldered in place
 - No replacements available; Modification using NTE relay is viable
- Early Kenwoods (520, 820, 599 Twins) use two identical relays....**But different coils!**
 - Easy to mix-up when servicing; One closes faster than the other to operate in a sequence during TX/RX changeover
- Vendors come to the rescue
 - Ken Kemski, K4EAA
 - Jim Showker, The Hybrid Store

KENWOOD

Early Kenwood

Used in 520, 820, 599 Twins

- OMRON "Plug-in" type MH4P (4PDT, 4 Form "C", 12vdc)
- Sequential Making & Breaking of contacts to avoid "Hot Switching"
- 300 ohm used as Antenna Relay** and switches faster
- 385 ohm used for Signal Switching** and switches a little slower
- Used in many other hybrids at that time!

Replacements – The Hybrid Store

Possible Replacements: NTE R16-17D5-12; Tyco R10-E1X4-V185; Magnecraft W67RCSX-7...(They show a mounting stud that MH4P doesn't have and a coil impedance of 185 ohms. More testing is needed)

NTE R16-17D5-12

4PDT, 4 Form "C"

KENWOOD

- TS-830S – Three relays and all labeled “RL-1” in schematic
 - #1, Soldered in Rectifier Unit is a SPDT Relay (G2E)
 - #2, Soldered in AF Unit does final bias, RIT, XIT, exciter gain is a 4PDT (LZN4)
 - #3, Plug-in-socket does Antenna, Xverter, Remote, is a DPDT (MX-2P)
- LZN4 problems concern the intermittent or **unstable ALC** and/or poor recovery of **receive sensitivity** after transmitting. It can impact several areas, but is most noticeable when switching from receive to transmit, and then back again.
- **Can RL-1 be repaired?** Possibly, try cleaning them.
 - Be careful, these are small, delicate relays, and are easily damaged. Usually, they can be cleaned with a strip of printer paper and wetted with “Deoxit”. Blow dry with compressed air.

Ken, K4EAA sells a replacement for the “LZN4” used on the TS-530 IF Unit and TS-830 AF Unit boards (These same relays are also used in the TS-120 and TS-130 transceiver on the IF and Filter boards)

TS-830S – all labeled “RL-1”

Obsolete Replacement: Panasonic NF4EB-12v

KENWOOD

TS-830 Antenna Relay

- **TS-830S – “RL-1”#3, OMRON Model MX, General Purpose Relay**
 - Specs: **MX2P**, 125 ohm coil, 5A, 15mS operate/release times
- **Replacement** – The Hybrid Store
- **Possible Replacement** – Omron has a new “MY” series of relays, but might have a different pin-out.
- **OMRON “MY2N”**, 160 ohm coil, 5A, 20mS operate/release times

MY2

KENWOOD Repairing the Kenwood TS-530S Antenna Relay

530 and 830 Relays

530 Repair Using NTE Relay

Replacement: NTE R16-11D5-12
(relay) and NTE R95-103 (socket)

Buy these: NTE R16-11D5-12 (relay) and NTE R95-103 (socket)

**12VDC DPDT 3A PC Mounted Relay
NTE R16-11D3-12P**

KENWOOD

KENWOOD

- SDR INTIGRATION INTO THE HYBRIDS
 - Jan Servaites N8CBX
 - (2014 softrock Presentation)
 - Alan K2QU Using SDRPlay

SDR Integration into the Legacy line

Presenter: Mr Jan Servaites N8CBX

Getting Started

- Kenwood provides 8.83mhz IF output on some models. The SM 220 owner's manual gives guidance on IF cable installations.
- Might need to attenuate the IF signal (a step attenuator with 20db capability).
- HF band SDR receiver (SoftRock kits from Tony Parks KB9YIG, fivedash.com).
- PC computer's soundcard (typically 48khz, stereo line input).
- Running HDSDR.exe and free download.

SDR Integration into the Legacy line

Presenter: Mr Jan Servaites N8CBX

Operating Hints & Tips

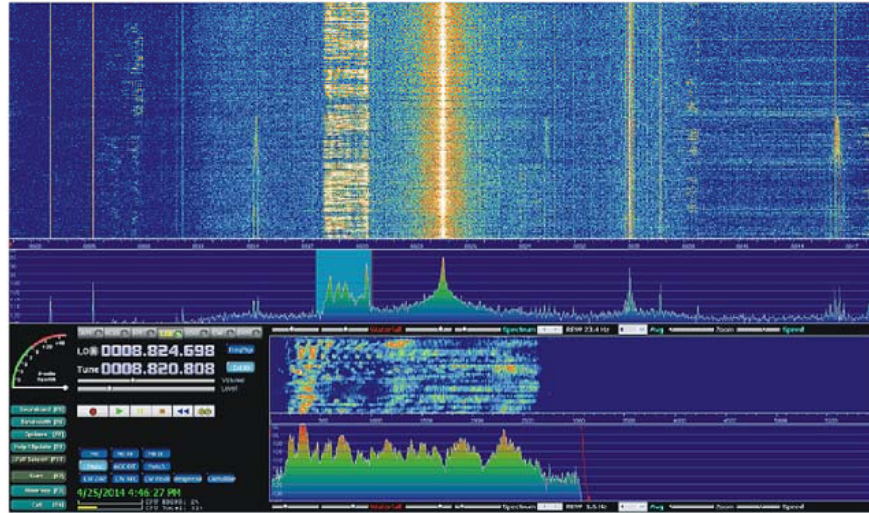

- "Softrock Ensemble-II Rx" has built in VFO. Frequency controlled by PC....(BEST!).
- "Softrock Lite" (\$25 kit w/8.812 MHz crystal. Fixed LO frequency).
- 48khz sound card works great; 96khz & 192khz s/c available & expensive.
- Many nice features in HDSDR; All modes, recording, spectrum/waterfall, filter widths, noise blanker.
- Panadapter capability adds a new dimension to the older radios. Can revitalized a vintage radio to newer standards, and the hobby enjoyment!

Connecting SDRplay to a Kenwood TS-830S

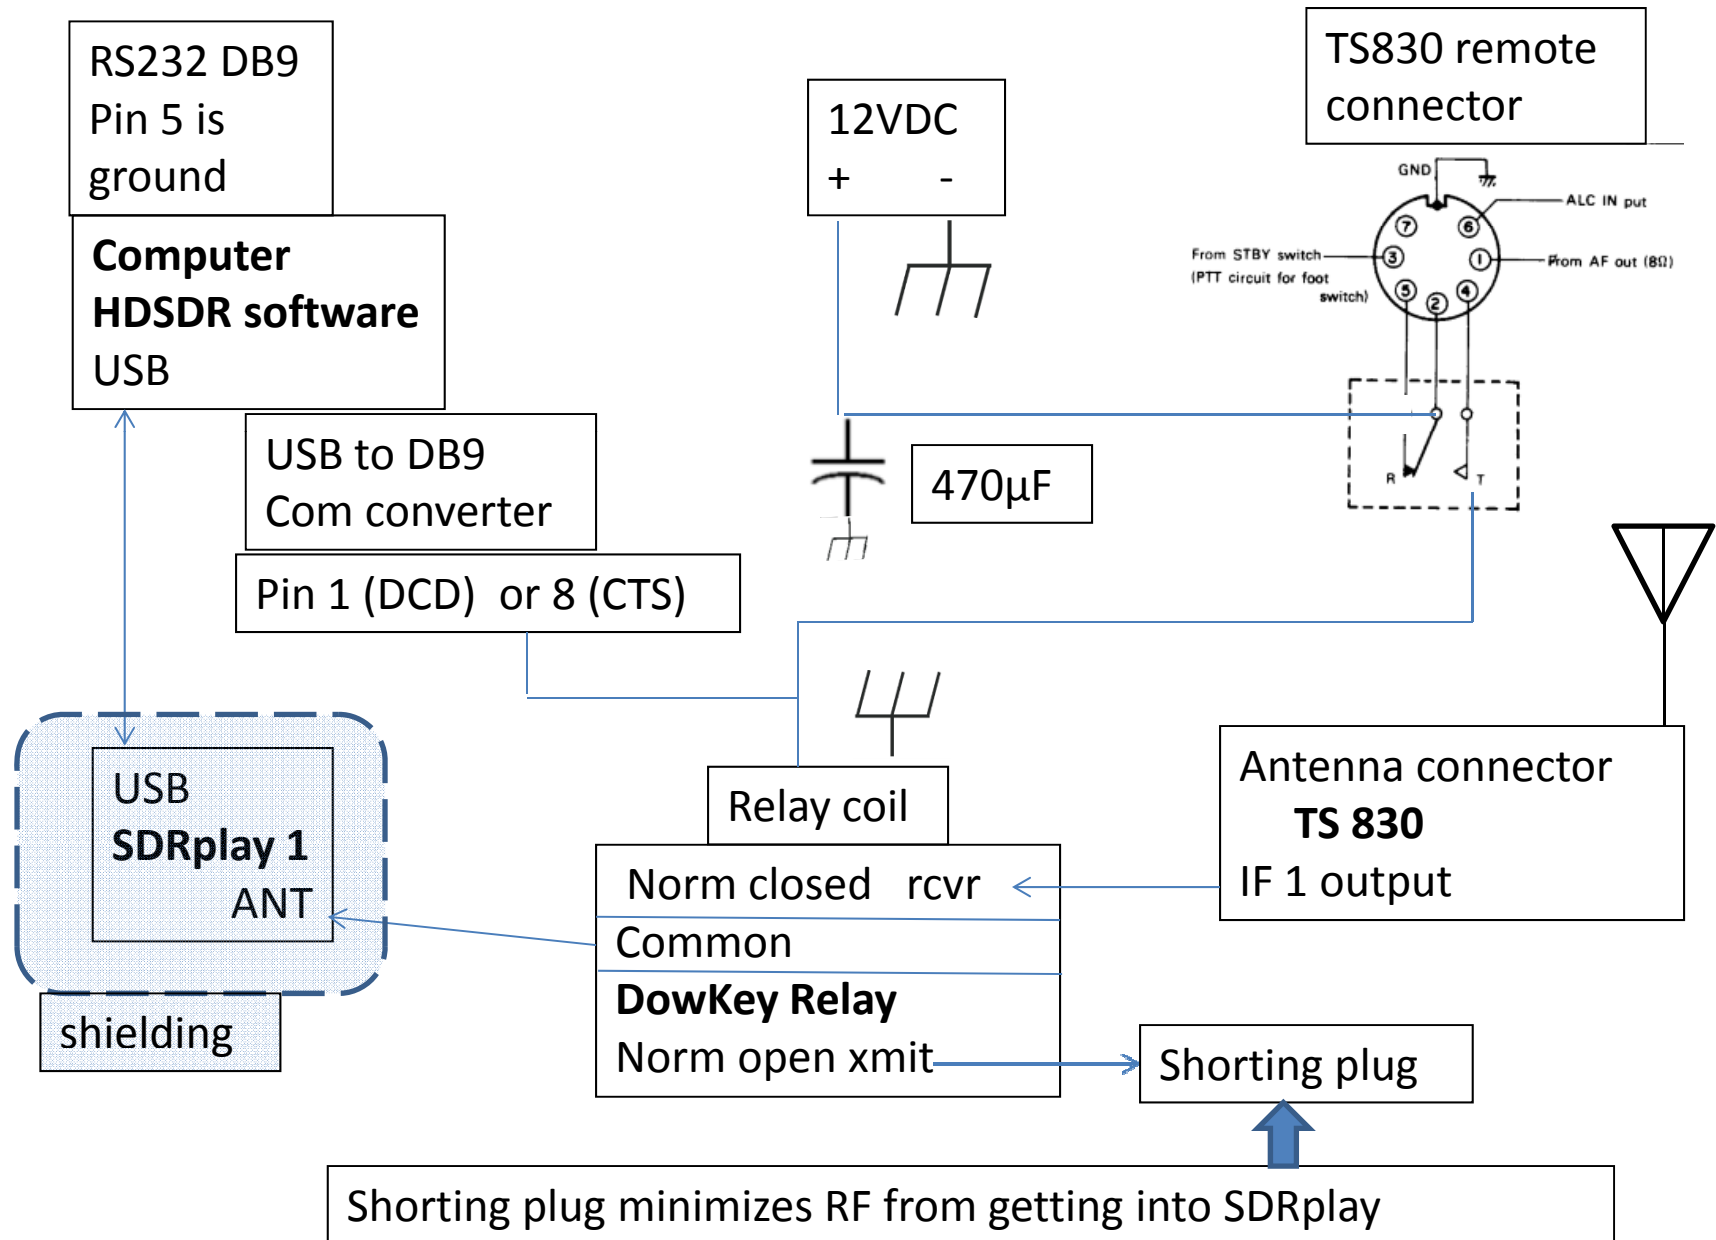

Alan K2QU

December, 2017

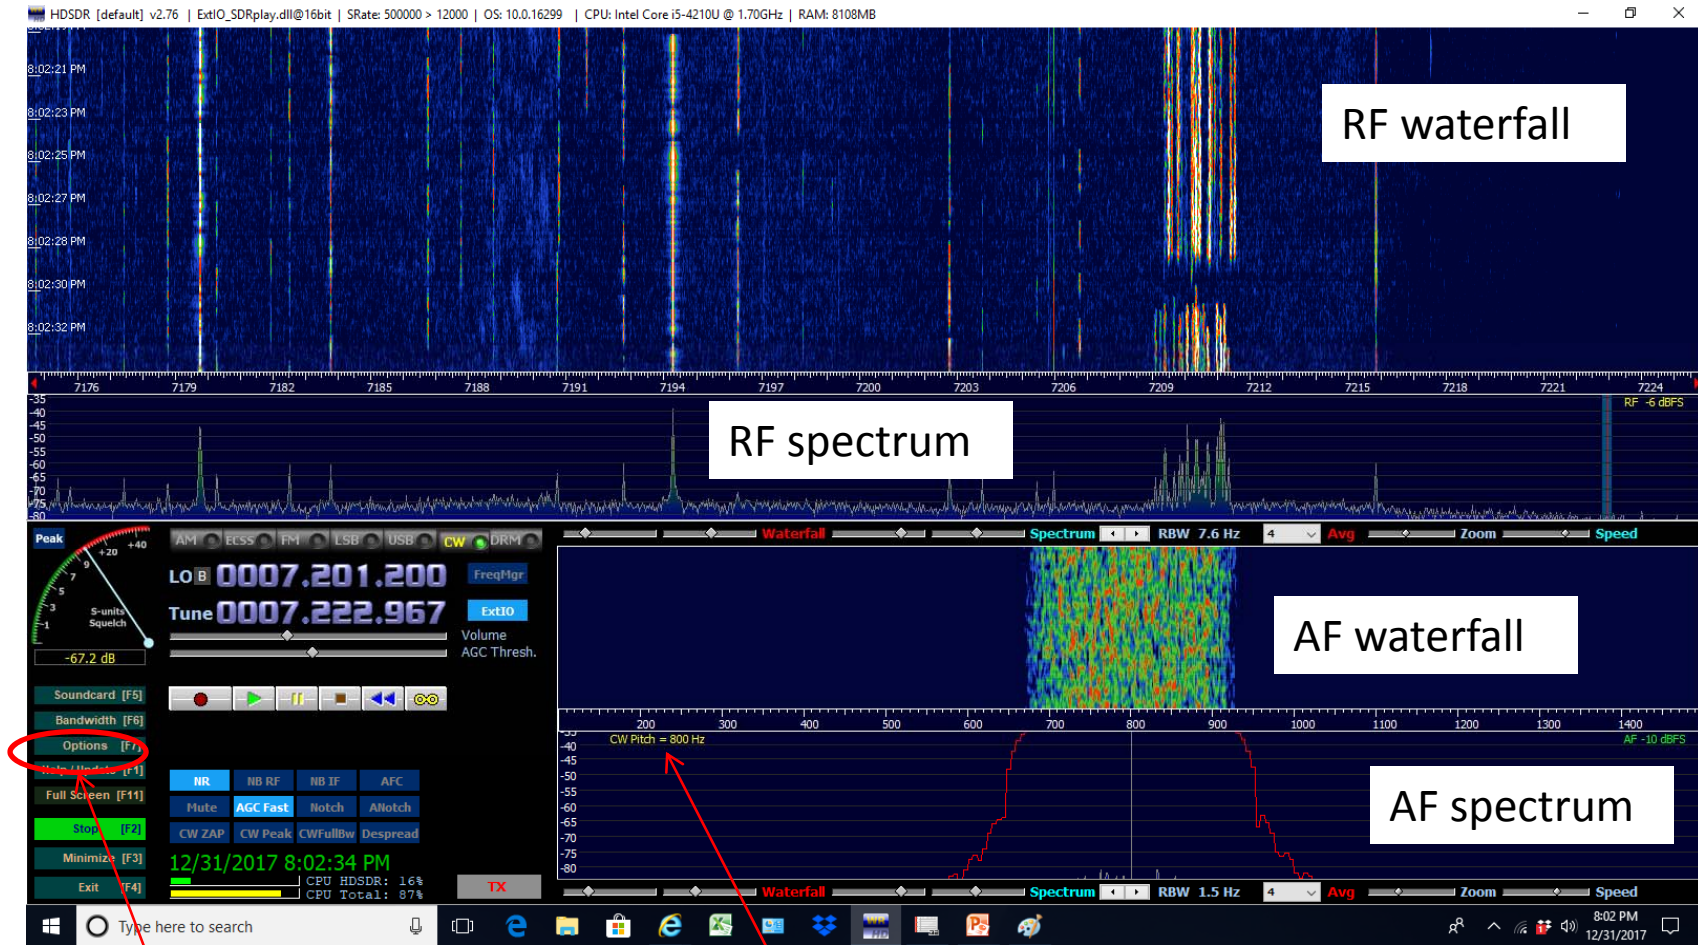

Please advise K2QU of improvements!

Hardware Connections

HDSDR Screen Layout

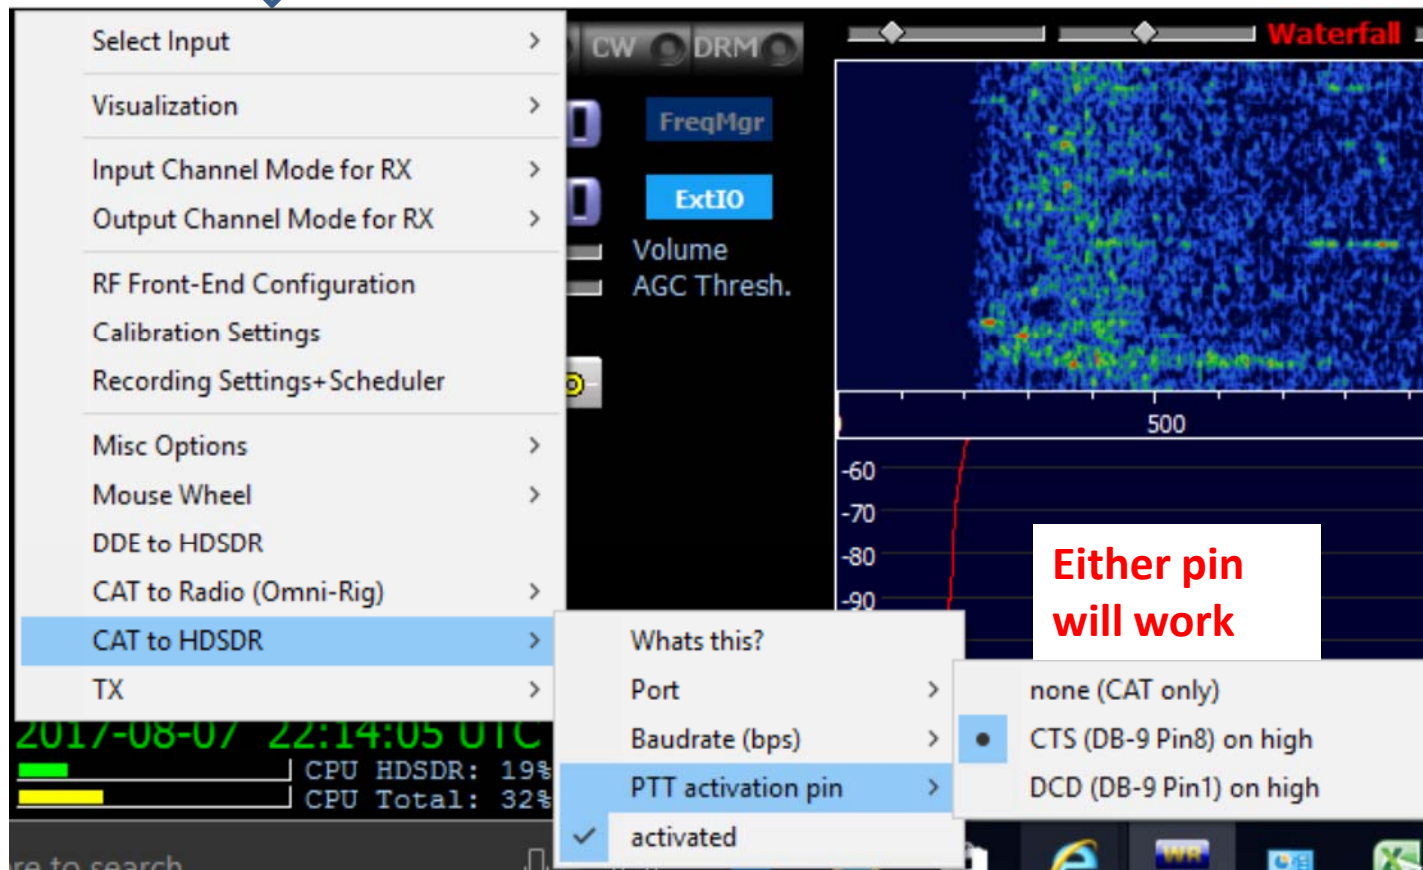

Click to set CW tone to **800Hz to match KW**

Options menu selection for setting SDRplay to work with KW Hybrid

Software Set-up to Activate T/R in HDSDR via COM port

Options menu selection

Software Set-up to Activate T/R in HDSDR via COM port

About 'CAT to HDSDR'

From options menu

HDSDR can get controlled over a serial/CAT interface.
HDSDR understands a small subset of Kenwood's CAT protocol:

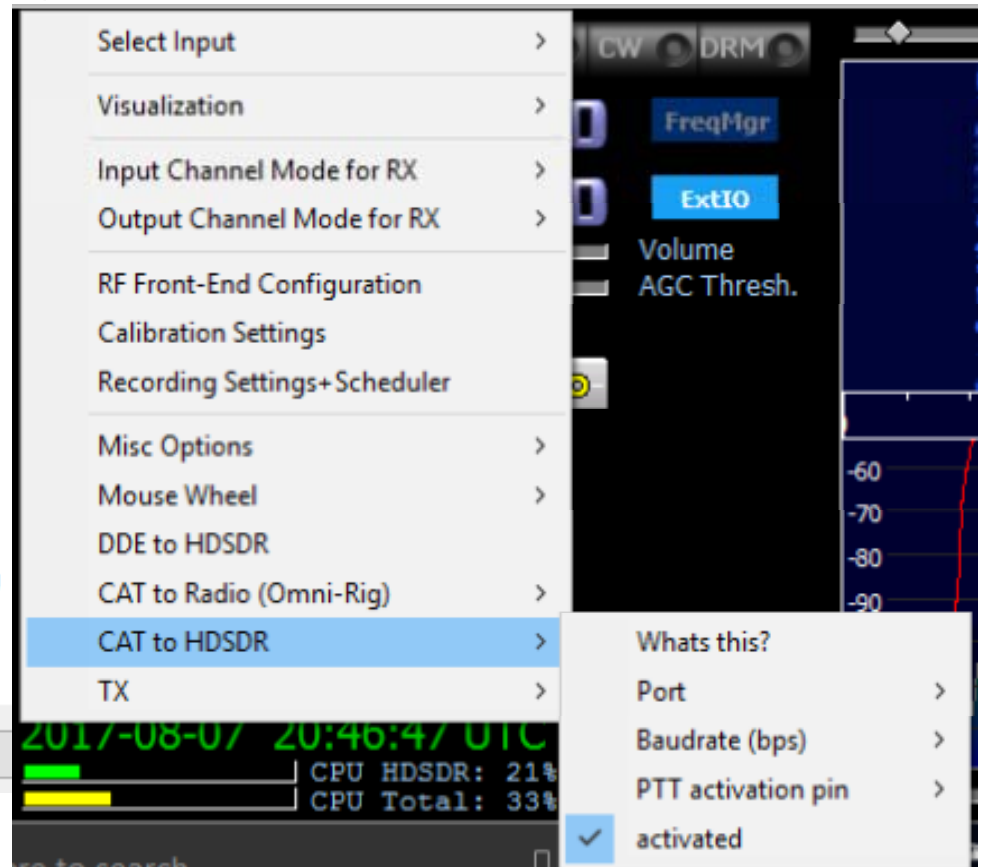

```
FA000000000000; // set tune frequency [Hz]
MD1; ... MD5;    // change mode [ 1=LSB, 2=USB, 3=CW, 4=FM, 5=AM ]
TX; and RX;      // switch RX/TX - only if the active ExtIO supports TX
For controlling HDSDR from another software with CAT support
(f.e. WSJT, Fldigi, MultiPSK, MixW amongst others),
you can use serial port emulator like 'com0com' or 'VSPE'.
```

For RX/TX switching you can also use 'high level' on CTS or DCD pin.
In the controlling software you have to configure RTS (instead CTS)
or DTR (instead DCD) for PTT control when you are using a Null-modem cable.
com0com uses such a Null-modem wiring as default. Prefer using 'CAT' as 'PTT
method' when available.

Configure '8 Data Bits', 'No Parity', '1 Stopbit' and 'No Handshake' in controlling software.

Port Male

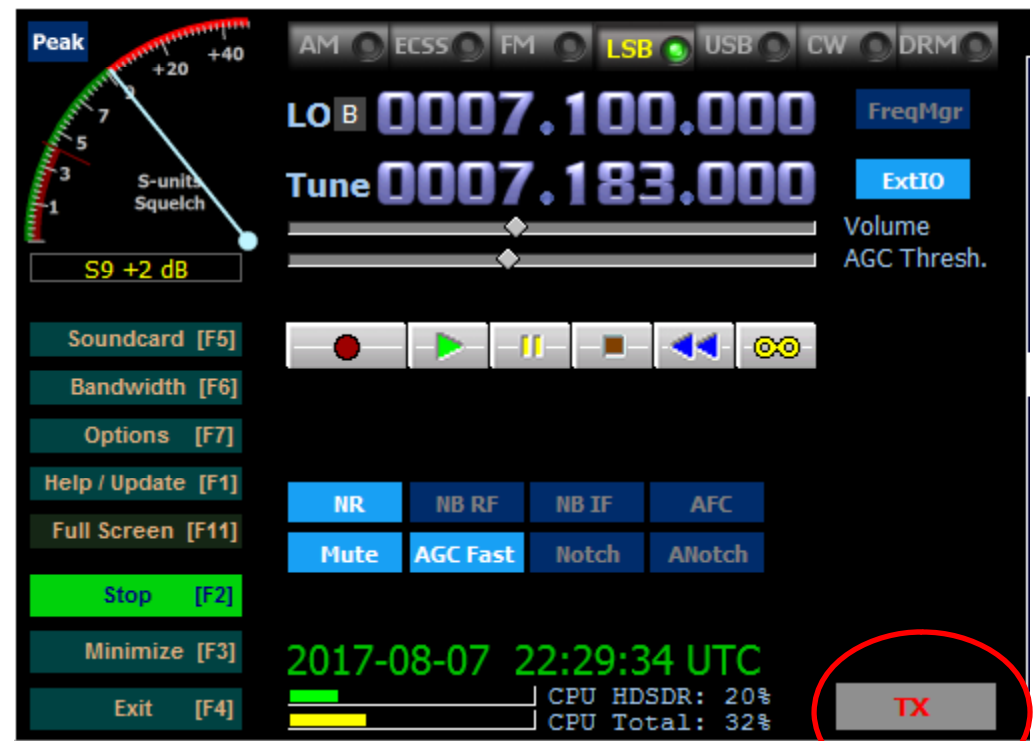

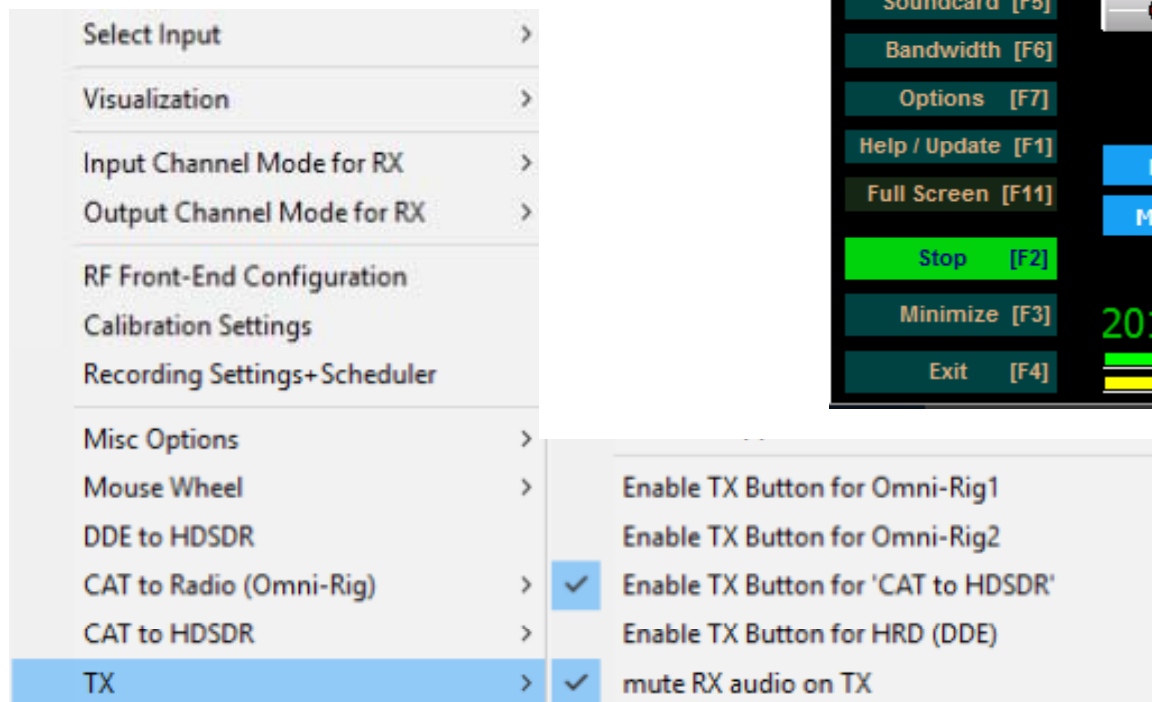

RS232 Pinout (9 Pin Male)	
Pin 1	DCD
Pin 2	RXD
Pin 3	TXD
Pin 4	DTR
Pin 5	GND
Pin 6	DSR
Pin 7	RTS
Pin 8	CTS
Pin 9	RI

Note: For my configuration, this T/R ONLY mutes audio, it does NOT put the RSP1 into standby!

Software Set-up to Activate T/R in HDSDR via COM port

From options menu

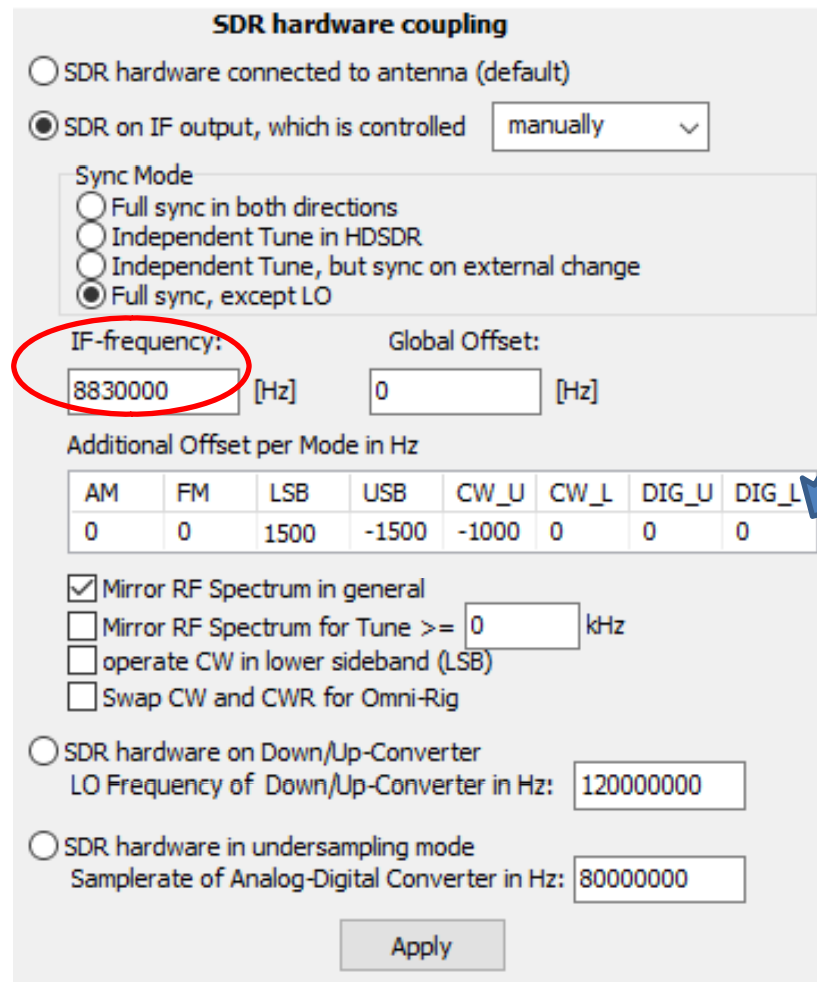

Confirms TX button is active;
Button turn **red** when DB9
pin goes high in transmit

Software Set-up for Synchronized Kenwood and SDRplay Tuning – IF set Exactly to KW

Options Menu: RF Front-end configuration

RF front-end frequency options

SDR hardware coupling

☐ SDR hardware connected to antenna (default)

☒ SDR on IF output, which is controlled manually

Sync Mode

☐ Full sync in both directions

☐ Independent Tune in HSDR

☐ Independent Tune, but sync on external change

☒ Full sync, except LO

IF-frequency: 8830000 [Hz]

Global Offset: 0 [Hz]

Additional Offset per Mode in Hz

AM	FM	LSB	USB	CW_U	CW_L	DIG_U	DIG_L
0	0	1500	-1500	-1000	0	0	0

☒ Mirror RF Spectrum in general

☐ Mirror RF Spectrum for Tune >= 0 kHz

☐ operate CW in lower sideband (LSB)

☐ Swap CW and CWR for Omni-Rig

☐ SDR hardware on Down/Up-Converter

LO Frequency of Down/Up-Converter in Hz: 120000000

☐ SDR hardware in undersampling mode

Samplerate of Analog-Digital Converter in Hz: 80000000

Apply

- The 1500 Hz SSB offsets are consistent with the TS830 IFshifts – slight adjustments will fix any TX/RX offset
- The -1000Hz CW makes the KW xmit frequency aligned exactly with rx zero beat (for my 830).
- The next slide shows how to determine the values for your hybrid
- You can also slightly offset the IF frequency if needed and then all other offsets will need to be changed, too.

How to Determine the SSB Offsets for Your Hybrid

RF front-end frequency options

SDR hardware coupling

☐ SDR hardware connected to antenna (default)

☒ SDR on IF output, which is controlled manually

Sync Mode

☐ Full sync in both directions

☐ Independent Tune in HDSDR

☐ Independent Tune, but sync on external change

☒ Full sync, except LO

IF-frequency: [Hz]

Global Offset: [Hz]

Additional Offset per Mode in Hz

AM	FM	LSB	USB	CW_U	CW_L	DIG_U	DIG_L
0	0	1500	-1500	-1000	0	0	0

☒ Mirror RF Spectrum in general

☐ Mirror RF Spectrum for Tune >= kHz

☐ operate CW in lower sideband (LSB)

☐ Swap CW and CWR for Omni-Rig

☐ SDR hardware on Down/Up-Converter
LO Frequency of Down/Up-Converter in Hz:

☐ SDR hardware in undersampling mode
Samplerate of Analog-Digital Converter in Hz:

Apply

- LSB and USB offsets: 1. Adjust main tuning on hybrid to a SSB station – listening on the hybrid. 2. Then, adjust offset until the station sounds the same listening on the SDRPlay.
- 3. This approach will get you very close. Since I only use the SDRPlay as a bandscope for SSB, if I am off a bit, it is not a big deal.

Determine the CW Offset for Your Hybrid

1. Set the CW tone on the HDSDR software to 800Hz, matching the hybrid Tx/Rx CW offset.
2. Find a CW station of known frequency (e.g. W1AW 3.5815MHz) – or calibrator.
3. Set hybrid to receive that station (main tuning $3.5815\text{MHz} - 800\text{Hz} = \mathbf{3.5807\text{MHz}}$)
4. Set CW_U so that SDR audio is aligned at 800Hz

RF front-end frequency options

SDR hardware coupling

☐ SDR hardware connected to antenna (default)

☒ SDR on IF output, which is controlled manually

Sync Mode

☐ Full sync in both directions

☐ Independent Tune in HDSDR

☐ Independent Tune, but sync on external change

☒ Full sync, except LO

IF-frequency: 8830000 [Hz] Global Offset: 0 [Hz]

Additional Offset per Mode in Hz

AM	FM	LSB	USB	CW_U	CW_L	DIG_U	DIG_L
0	0	1500	-1500	-1000	0	0	0

☒ Mirror RF Spectrum in general

☐ Mirror RF Spectrum for Tune \geq 0 kHz

☐ operate CW in lower sideband (LSB)

☐ Swap CW and CWR for Omni-Rig

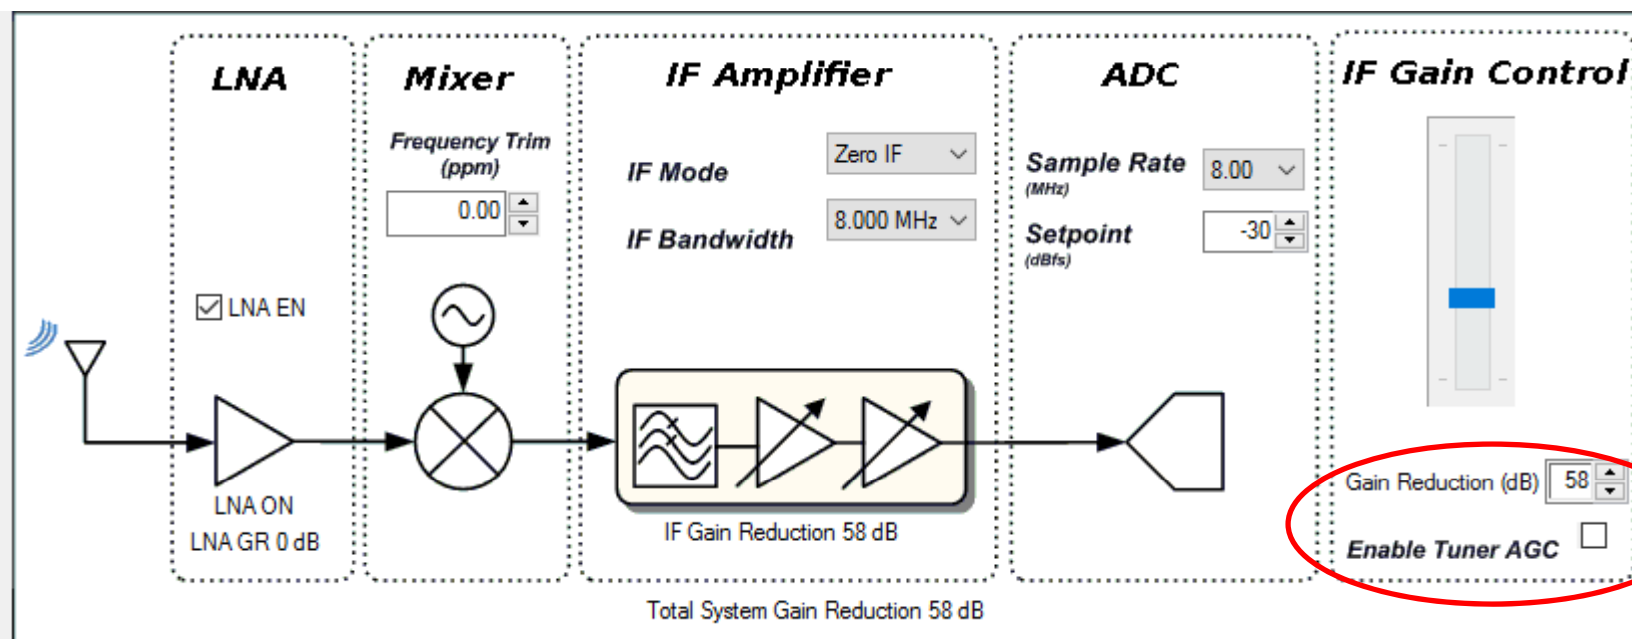

When this operation is complete, CW listening can now be done via the SDRplay (don't use hybrid audio) – but you will need to do something if you want a side tone!

ExtIO for Use with the Kenwood IF

Click to open ExtIO

- IF Tuner AGC: select based on band condx for KNWD (checked for non-KNWD use)
- IF Gain Reduction: set for comfortable operation – depends on noise floor.
- The other setting are not too critical

Software Set-up for Independent Kenwood and SDRplay tuning

RF front-end frequency options

SDR hardware coupling

☒ SDR hardware connected to antenna (default)

☐ SDR on IF output, which is controlled manually

Sync Mode

☐ Full sync in both directions

☐ Independent Tune in HDSDR

☐ Independent Tune, but sync on external change

☒ Full sync, except LO

IF-frequency: 8830000 [Hz] Global Offset: 0 [Hz]

Additional Offset per Mode in Hz

AM	FM	LSB	USB	CW_U	CW_L	DIG_U	DIG_L
0	0	1500	-1500	-1000	0	0	0

☒ Mirror RF Spectrum in general

☐ Mirror RF Spectrum for Tune >= 0 kHz

☐ operate CW in lower sideband (LSB)

☐ Swap CW and CWR for Omni-Rig

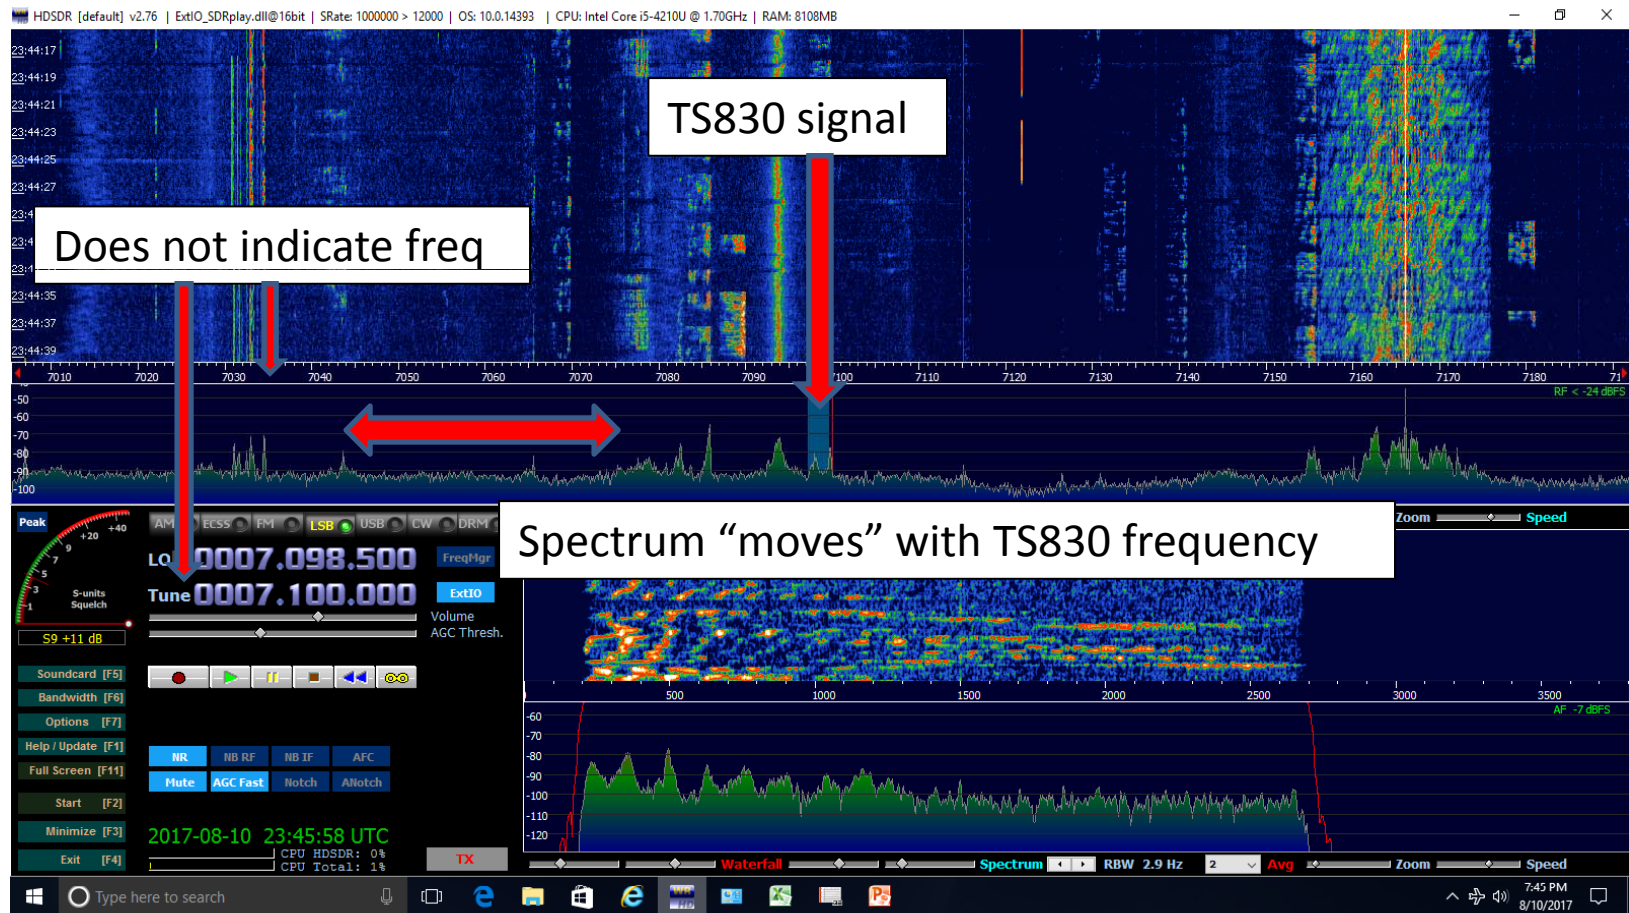

☐ SDR hardware on Down/Up-Converter
LO Frequency of Down/Up-Converter in Hz: 120000000

☐ SDR hardware in undersampling mode
Samplerate of Analog-Digital Converter in Hz: 80000000

Apply

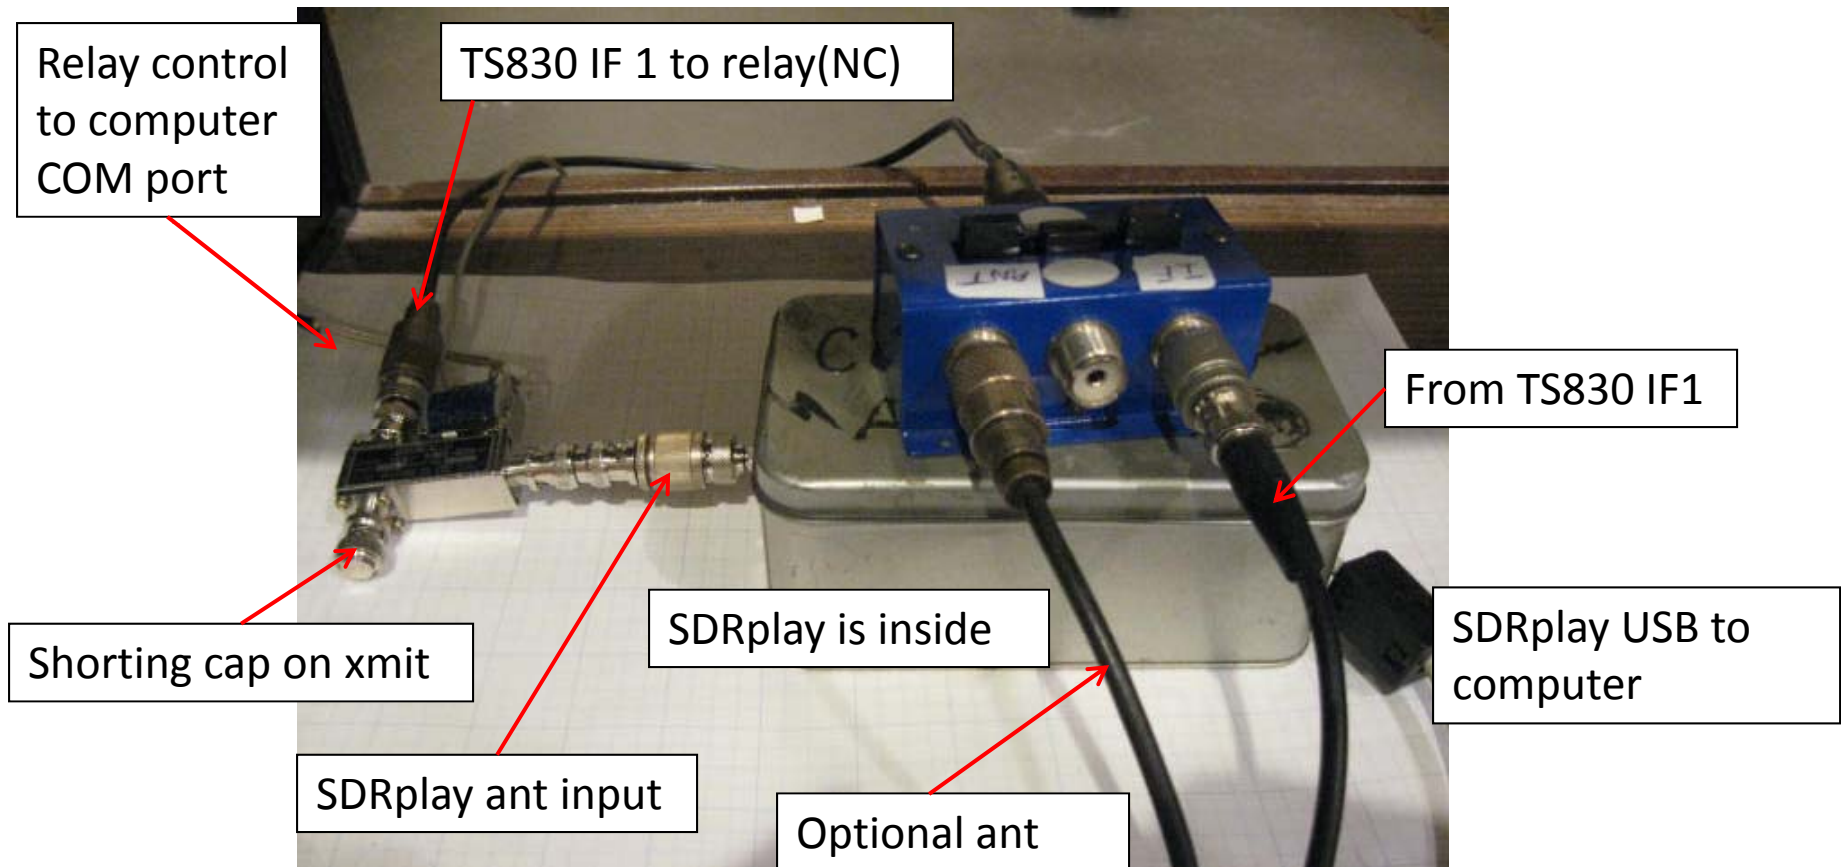

- With this option checked, none of the other settings are relevant.
- The “Full sync” , IF and Offsets have no impact.
- The SDRplay operates as it normally would with an antenna connected directly to it. However, the SDRplay will also work in this mode with the TS830 IF1 output connected to the SDRplay antenna input – reduced sensitivity.

HDSDR with Sync to TS830

Only method to know frequency is by TS830 VFO readout

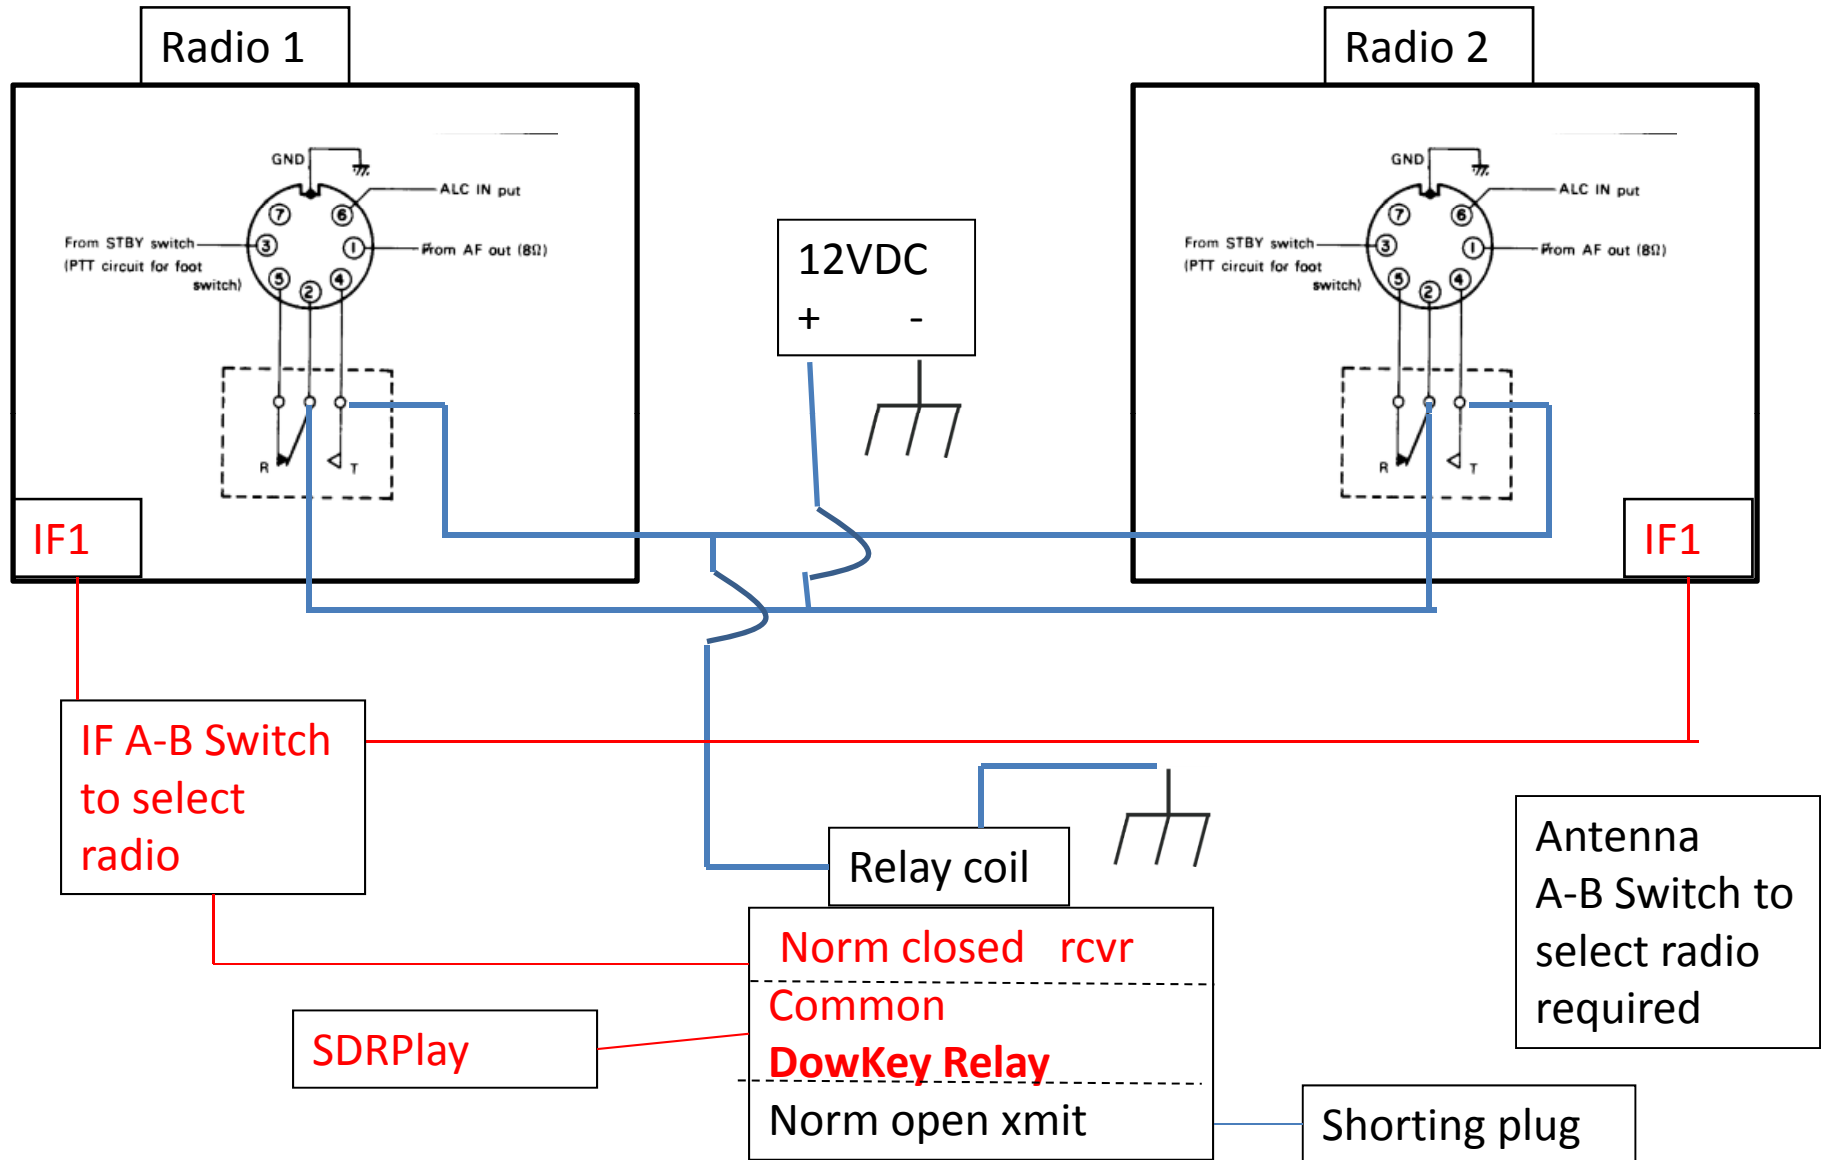

Relay Connections to SDRplay

Connecting Multiple Radios to SDRPlay

- What's needed:
 - A-B switch to select which Radio is connected to the antenna – which you would have if you have multiple radios
 - A-B switch to select IF1 output of each radio to SDRPlay
- Hardest part is wiring the 7-pin Din plugs for the accessory sockets
- I suggest to terminate the cable from each accessory socket to a terminal strip
- The next slide shows the wiring
 - **KW Radio relays are wired in parallel to switch 12VDC Dow Key relay**
 - Optional LED paralleled with Dow Key coil to confirm operation (not shown)
 - Manual A-B switch to select Radio IF (low power; coax switch)
 - For clarity, diagram omits the connection to the RS232 – but it is just the switched 12VDC
- The method can be extended to more than 2 radios – with A-B-C-D switch!!

Connecting Multiple Radios to SDRPlay

Connecting SDRplay to a Kenwood TS-830S

Alan K2QU

December, 2017

Please advise K2QU of improvements!

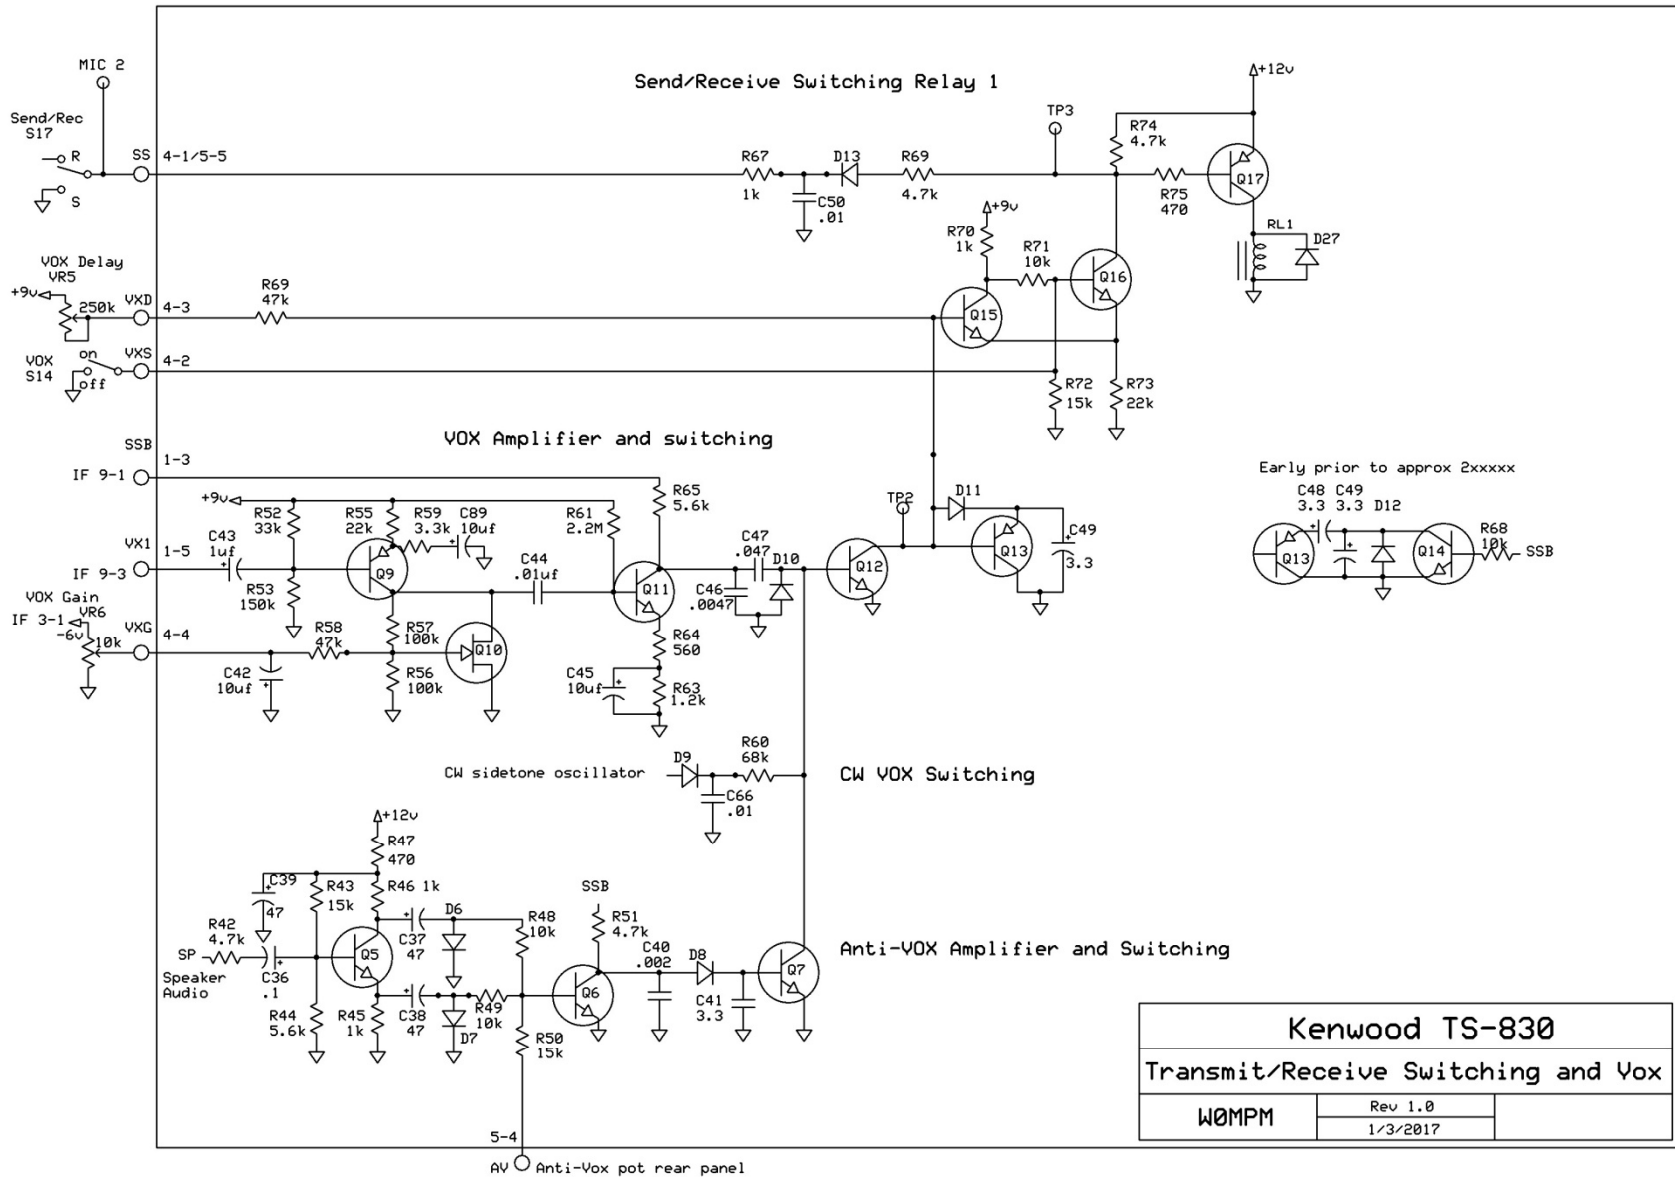

Summary

- Hardware
 - TS-830S aux relay shorts SDRplay input and mutes HDSDR audio on transmit
 - SDRplay RSP1 (and optional shielding mitigates xmit RF)
 - DowKey Relay & COM port (RS232)
 - Alternate to a DowKey: DXE RTR-2 or MFJ-1708SDR
 - One of those devices is needed to short SDRplay antenna input during transmission.
 - I used a FTDI-A36 USB to DB9 COM converter to mute SDRplay during transmission
 - 12VDC supply & 470 μ F capacitor (may not be needed)
- Software: HDSDR V2.76
